

EXTERNAL RETURN CHUTE

The Arcus Return Chute solutions are designed to be either retro-fitted to your current book drop opening, or installed to a new opening in your exterior or interior wall. They can be configured as a passive return chute or can be fitted with automated locking flap, which will only open for a valid barcode scan (or optionally a valid library RFID tag).

Return Chutes can be supplied with a smart guiding light system that lets users know if the chute is open, online, or closed.

UPS backup ensures your smart return chutes will continue to open or close during power outages.

They are compatible with the Arcus Smart RFID Returns system which will immediately process a return transaction for the item and remove it from the patron's library card/account. They are also compatible with the Arcus RFID localisation system and will update the items last known location.

These elegant external chutes are available in stainless steel, powder coated to the colour of your choice, or vinyl wrapped with custom designed artwork.

They are also available in custom sizes and are designed for either indoor or outdoor use.

They are designed to be used with both the Adilam Smart Bin and Adilam oversized Smart Bin, both HF and UHF RFID systems, and conform to industry, ergonomic, and disability standards.

Technical Specifications

Dimensions	515(W) x 475 (H) mm
Wall Cut Out	400(W) x 400 (H) mm
Wall Thickness	Can be installed in wall depths of up to 390mm. Customisations available for thicker walls.
